1.1.1. Calcula... 05:55

Write a program that accepts the mass of an object (in kilograms) and its velocity (in meters per second), then calculates and displays the momentum of the object. The momentum p is calculated using the formula:

$$p =$$

where:
m is the mass of the object (in kilograms).
v is the velocity of the object (in meters per second).

Input Format:
A single floating-point number representing the mass of the object in kilograms.
A single floating-point number representing the velocity of the object in meters per second.

Output Format:
The output will display calculated momentum with appropriate units (kgm/s) (rounded up to 2 decimal places).

Sample Test Cases +

1.1.2. Conditi... 29:58

Write a Python program that accepts an integer n as input. Depending on the number of digits in n.

Constraints:
$1 \le n \le 999$

Input Format:
The input consists of a single integer n.

Output Format:
If n is a single-digit number, print its square.
If n is a two-digit number, print its square root (rounded to two decimal places).
If n is a three-digit number, print its cube root (rounded to two decimal places).
Else print "Invalid".

Sample Test Cases +

Explorer

conditional... Submit

```
1  n=int(input())
2  if (n>=0 and n<=9):
3      print(n*n)
4  elif (n>=10 and n<=99):
5      q=n**0.5
6      print('%0.2f'%q)
7  elif (n >= 100 and n<=999):
8      r=n**(1/3)
9      print('%.2f'%r)
10 else:
11     print("Invalid")
```

Debugger

1.1.4. Reverse a Number

14:51

You are given an integer number. Your task is to reverse the digits of the number and print the reversed number.

Input Format
The input is an integer.

Output Format
Print a single integer which is the reversed number.

Sample Test Cases +

Explorer

reverseNu...

Submit

```
1 num=int(input())
2 n=str(num)
3 print(n[::-1])
```

1.1.5. Multiplication Table

04:00

Write a Python program that takes an integer as input and prints the multiplication table for that integer from 1 to 10.

Input Format:
The first line of input contains an integer that represents the number for which the multiplication table is to be printed.

Output Format:
Print the multiplication table for the given number .

Sample Test Cases +

Explorer

multiplicat...

Submit

```
1  i=int(input())
2  n=1
3  while n<=10:
4      print(i,"x",n,"=",i*n)
5      n+=1
```

Debugger

1.2.1. Pass o... 49:23

Write a Python program that accepts the number of courses and the marks of a student in those courses. The grade is determined based on the aggregate percentage:

- If the aggregate percentage is greater than 75, the grade is Distinction.
- If the aggregate percentage is greater than or equal to 60 but less than 75, the grade is First Division.
- If the aggregate percentage is greater than or equal to 50 but less than 60, the grade is Second Division.
- If the aggregate percentage is greater than or equal to 40 but less than 50, the grade is Third Division.

Input Format:
The first input will be an integer n, the number of courses.
The second input will be n integers representing the marks of the student in each of the n courses, separated by a space.

Output Format:
If the student passes all courses:

- Print the aggregate percentage (rounded to two decimal places).
- Print the grade based on the aggregate percentage.

If the student fails any course (marks < 40 in any course), print:

- "Fail".

1.2.2. Fibona...

02:17

Write a Python program to find the Fibonacci series of a given number of terms using recursive function calls.

Expected Output-1:

Enter terms for Fibonacci series: 5
0 1 1 2 3

Expected Output-2:

Enter terms for Fibonacci series: 9
0 1 1 2 3 5 8 13 21

Instructions:

- Your input and output must follow the input and output layout mentioned in the visible sample test case.
- Hidden test cases will only pass when users' input and output match the expected input and output.

2.1.1. List op... 55:50

Write a Python program that implements a menu-driven interface for managing a list of integers. The program should have the following menu options:
1. Add
2. Remove
3. Display
4. Quit

The program should repeatedly prompt the user to enter a choice from the menu. Depending on the choice selected, the program should perform the following actions:

- **Add**: Prompts the user to enter an integer and add it to the integer list. If the input is not a valid integer, display "Invalid input".
- **Remove:** Prompts the user to enter an integer to remove from the list. If the integer is found in the list, remove it; otherwise, display "Element not found". If the list is empty, display "List is empty".
- **Display**: Displays the current list of integers. If the list is empty, display "List is empty".
- **Quit**: Exits the program.
- The program should handle invalid menu choices by displaying "Invalid choice".Ensure that the program continues to prompt the user until they choose to quit (option 4).

Sample Test Cases +

3.1.1. Numpy... 24:20

Write a python program to demonstrate the usage of ndim, shape and size for a Numpy Array. The program should create a NumPy array using the entered elements and display it. Assume all input elements are valid numeric values.

Input Format:

- User inputs the number of rows and columns with space separated values.
- User inputs elements of the array row-wise followed line by line, separated by spaces.

Output Format:

- The created NumPy array based on the input dimensions and elements.
- Dimensions (ndim): Number of dimensions of the array.
- Shape: Tuple representing the shape of the array (number of rows, number of columns).
- Size: Total number of elements in the array.

Note: Use reshape() function to reshape the input array with the specified number of rows and columns.

3.2.1. Numpy... 77/79

The given code takes two 3×3 matrices, `matrix_a`, and `matrix_b`, as input from the user and converts them into NumPy arrays.

Task:

You are required to compute and display the results of the following matrix operations:

1. **Addition** (`matrix_a + matrix_b`)
2. **Subtraction** (`matrix_a - matrix_b`)
3. **Element-wise Multiplication** (`matrix_a * matrix_b`)
4. **Matrix Multiplication** (`matrix_a · matrix_b`)
5. **Transpose of Matrix A**

Input Format:

- The user will input 3 rows for `matrix_a`, each containing 3 integers separated by spaces.
- Similarly, the user will input 3 rows for `matrix_b`, each containing 3 integers separated by spaces.

Output Format:

The program should display the results of the operations in the following order:

1. The result of Addition.
2. The result of Subtraction.
3. The result of Element-wise Multiplication.
4. The result of Matrix Multiplication.
5. The Transpose of Matrix A.

3.2.6. Numpy... 04:21

The given code in the editor takes a single array, `array1`, as space-separated integers as input from the user.
Additionally, it takes the following inputs:

- `search_value`: The value to search for in the array.
- `count_value`: The value to count its occurrences in the array.
- `broadcast_value`: The value to add for broadcasting across the array.

You need to complete the code to perform the following operations:
1. Searching: Find the indices where `search_value` appears in `array1` and print these indices.
2. Counting: Count how many times `count_value` appears in `array1` and print the count.
3. Broadcasting: Add `broadcast_value` to each element of `array1` using broadcasting, and print the resulting array.
4. Sorting: Sort `array1` in ascending order and print the sorted array.

Input Format:

1. A single line containing space-separated integers representing `array1`.
2. An integer `search_value` represents the value to search for in the array.
3. An integer `count_value` represents the value to count in the array.
4. An integer `broadcast_value` represents the value to add to each element of the array.

Output Format:

1. The indices where `search_value` occurs in `array1`.
2. The count of occurrences of `count_value` in `array1`.
3. The array after adding the `broadcast_value` to each element.
4. The sorted array.

3.2.7. Studen... 35:00

Write a Python program that takes the file name of a CSV file containing student details, including roll numbers and their marks in three subjects as input, reads the data, and performs the following operations:

- **Print all student details**: Display the complete details of all students, including roll numbers and marks for all subjects.
- **Find total students**: Determine the total number of students in the dataset.
- **Print all student roll numbers**: Extract and print the roll numbers of all students.
- **Print Subject 1 marks**: Extract and print the marks of all students in Subject 1.
- **Find minimum marks in Subject 2**: Identify the lowest marks in Subject 2.
- **Find maximum marks in Subject 3**: Identify the highest marks in Subject 3.
- **Print all subject marks**: Display the marks of all students for each subject.
- **Find total marks of students**: Compute the total marks for each student across all subjects.
- **Find the average marks of each student**: Compute the average marks for each student.
- **Find average marks of each subject**: Compute the average marks for all students in each subject.
- **Find average marks of Subject 1 and Subject 2**: Compute the average marks for Subject 1 and Subject 2.
- **Find average marks of Subject 1 and Subject 3**: Compute the average marks for Subject 1 and Subject 3.
- **Find the roll number of the student with maximum marks in Subject 3**: Identify the student with the highest marks in Subject 3 and print their roll number.
- **Find the roll number of the student with minimum marks in Subject 2**: Identify the student with the lowest marks in Subject 2 and print their roll number.
- **Find the roll number of students who scored 24 marks in Subject 2**: Identify students who obtained exactly 24 marks in Subject 2 and print their roll numbers.
- **Find the count of students who got less than 40 marks in Subject 1**: Count the number of students who scored less than 40 marks in Subject 1.

4.1.1. Pandas... 19:22

Write a Python program that takes a list of numbers from the user, creates a Pandas series from it, and then calculates the mean of even and odd numbers separately using the **groupby** and **mean()** operations.

Input Format:

- The user should enter a list of numbers separated by space when prompted.

Output Format:

- The program should display the mean of even and odd numbers separately.
- Each mean value should be displayed with a label indicating whether it corresponds to even or odd numbers.

Sample Test Cases +

4.1.2. Diction... 55:38

A dictionary of lists has been provided to you in the editor. Create a DataFrame from the dictionary of lists and perform the listed operations, then display the DataFrame before and after each manipulation.

Create the DataFrame:
- Convert the dictionary to a Pandas DataFrame.

Add a new row:
- Take inputs from the user for the new row data (name, age).
- Add the new row to the DataFrame.
- Display the DataFrame after adding the new row.

Modify a row:
- Modify a specific row by changing the age. Take the row index and new age value from the user.
- Display the DataFrame after modifying the row.

Delete a row:
- Take the row index to be deleted from the user.
- Remove the specified row.
- Display the DataFrame after deleting the row.

Add a new column:
- Add a column **Gender** with values taken from the user.
- Display the DataFrame after adding the new column.

Modify a column:
- Convert names to uppercase.
- Display the DataFrame after modifying the column.

Delete a column:
- Remove the **Age** column.
- Display the DataFrame after deleting the column.

4.2.4. Most F... 07:40

Write a Python program that takes the file name of a CSV file as input, reads the data, and performs the following operations:

- The CSV file contains the following columns: Date, Product, Quantity, Price, and City.
- For each date, find all pairs of products that were sold together (i.e., two products sold on the same date).
- Output the product pair/s that was sold most frequently.

Sample Data:

```
Date,Product,Quantity,Price,Cit
2025-01-01,Product A,5,20,New \
2025-01-01,Product B,3,15,Los A
2025-01-02,Product A,7,20,New \
2025-01-02,Product C,4,30,Chica
2025-01-03,Product B,2,15,Chica
2025-01-03,Product A,8,20,Los A
2025-01-04,Product C,6,30,New \
2025-01-04,Product B,5,15,Los A
2025-01-05,Product A,3,20,Chica
2025-01-05,Product C,10,30,Los
```

Explanation:

Transactions:

- **2025-01-01**: Product A, Product B
- **2025-01-02**: Product A, Product C
- **2025-01-03**: Product B, Product A
- **2025-01-04**: Product C, Product B
- **2025-01-05**: Product A, Product C

Now, let's count how often the pairs of products appear together:

- **Product A and Product B**: Appear in transactions on 2025-01-01 and 2025-01-03.
- **Product A and Product C**: Appear in transactions on 2025-01-02 and 2025-01-05.
- **Product B and Product C**: Appears in transactions on 2025-01-04.

Most Frequent Product Combinations:

- **Product A and Product B** (2 times)
- **Product A and Product C** (2 times)

Note:

The data cannot be displayed in the file. You can refer to the sample data provided for insights.

4.2.5. Titanic ... 04:11

You are provided with the Titanic dataset containing information about passengers on the Titanic. Your task is to write Python code to answer the following questions based on the dataset. For each question, perform necessary data cleaning, transformations, and calculations as required.

1. Display the first 5 rows of the dataset.
2. Display the last 5 rows of the dataset.
3. Get the shape of the dataset (number of rows and columns).
4. Get a summary of the dataset (using .info()).
5. Get basic statistics (mean, standard deviation, etc.) of the dataset using .describe().
6. Check for missing values and display the count of missing values for each column.
7. Fill missing values in the 'Age' column with the median age.
8. Fill missing values in the 'Embarked' column with the most frequent value (mode).
9. Drop the 'Cabin' column due to many missing values.
10. Create a new column, 'FamilySize' by adding the 'SibSp' and 'Parch' columns.

The Titanic dataset contains columns as shown below,

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Bradl
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,
7,0,1,"McCarthy, Mr. Timothy J"
8,0,3,"Palsson, Master. Gosta L
9,1,3,"Johnson, Mrs. Oscar W (E
10,1,2,"Nasser, Mrs. Nicholas (
```

5.1.1. Stacke... 04:05

Create a stacked area plot to visualize the temperature variations for three different cities (City A, City B, and City C) across the months of the year. The temperature data is provided for each city in the editor.

Your task is to:

- Create a stacked area plot using the data.
- Label the x-axis as "Month", the y-axis as "Temperature", and provide the title "Temperature Variation" for the plot.
- Display the plot showing the temperature variation for each city throughout the months of the year.

5.2.1. Titanic ... 05:53

Write a Python program to analyze and visualize data from the Titanic dataset based on the following instructions:

Dataset Information:

The dataset is stored in a CSV file named `titanic.csv` and has been loaded using the pandas library. It contains the following columns:

- `Pclass`: Passenger class (1 = First, 2 = Second, 3 = Third).
- `Gender`: Gender of the passenger (male/female).
- `Age`: Age of the passenger.
- `Survived`: Survival status (0 = Did not survive, 1 = Survived).
- `Fare`: Ticket fare paid by the passenger.

Visualization:

To represent these trends, you will create 5 visualizations using Matplotlib. The visualizations should be arranged in a 3x2 grid (3 rows and 2 columns).

Visualization Details:

Write the code to create a series of visualizations as follows:

Bar Plot (Pclass Distribution):

- Create a bar plot to show the distribution of passengers across the different passenger classes (`Pclass`).
- Use the color `skyblue` for the bars.
- Title the plot as **"Passenger Class Distribution"**.
- Label the x-axis as **"Pclass"** and the y-axis as **"Count"**.

Pie Chart (Gender Distribution):

- Create a pie chart to display the distribution of male and female passengers.
- Use `lightblue` for males and `lightcoral` for females.
- Include percentages on the slices (use `autopct='%1.1f%%'`).
- Title the plot as **"Gender Distribution"**.

Histogram (Age Distribution):

- Create a histogram to visualize the distribution of passengers' ages.
- Use `lightgreen` for the bars with black edges (`edgecolor = 'black'`).
- Set the number of bins to **8** for the histogram.
- Title the plot as **"Age Distribution"**.
- Label the x-axis as **"Age"** and the y-axis as **"Frequency"**.

Bar Plot (Survival Count):

- Create a bar plot to show the count of passengers who survived and those who did not, based on the `Survived`

```
1  import pandas as pd
2  import matplotlib.pyplot as plt
3
4  # Load the Titanic dataset from the CSV file
5  df = pd.read_csv('titanic.csv')
6
7  # Set up the figure for 5 subplots
8  fig, axes = plt.subplots(3, 2, figsize=(12, 12))
9
10 # write the code..
11 count=df['Pclass'].value_counts().sort_index()
12 count_gen=df['Gender'].value_counts()
13 count_s=df['Survived'].value_counts().sort_index()
14
15 axes[0,0].bar(count.index,count.values,color=['skyblue'])
16 axes[0,0].set_title('Passenger Class Distribution')
17 axes[0,0].set_xlabel('Pclass')
18 axes[0,0].set_ylabel('Count')
19
20 axes[0,1].pie(count_gen.values,labels=['male','female'],colors=['lightblue','lightcoral'],autopct='%1.1f%%')
21 axes[0,1].set_title('Gender Distribution')
22
23 axes[1,0].hist(df['Age'],color=['lightgreen'],edgecolor='black',bins=8)
24 axes[1,0].set_title('Age Distribution')
25 axes[1,0].set_xlabel('Age')
26 axes[1,0].set_ylabel('Frequency')
27
28 axes[1,1].bar(count_s.index,count_s.values,color=['lightblue','lightcoral'])
29 axes[1,1].set_title('Survival Count')
30 axes[1,1].set_xla
```

< Prev Reset Submit Next >

5.2.2. Histogr... 01:40

Write a Python code to plot a histogram for the distribution of the 'Age' column from the Titanic dataset. The histogram should display the frequency of different age ranges with the following specifications:

1. Use **30 bins** for the histogram.
2. Set the **edge color** of the bars to **black** (k).
3. Label the x-axis as **'Age'** and the y-axis as **'Frequency'**.
4. Add the title **"Age Distribution"** to the histogram.

The Titanic dataset contains columns as shown below,

PassengerId	Survived	Pclass	Name	Sex	Age	SibSp	Parch	Ticket	Fare	Cabin	Embarked

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Bradl
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,
7,0,1,"McCarthy, Mr. Timothy J"
8,0,3,"Palsson, Master. Gosta L

5.2.4. Bar Plo...

Write a Python code to plot a stacked bar chart that shows the count of passengers who survived and did not survive, grouped by gender, in the Titanic dataset. The chart should display the following specifications:

1. Group the data by the **'Sex'** column, then use the **value_counts()** function to count the occurrences of survivors (0 = Did not survive, 1 = Survived) for each gender.
2. Use a **stacked bar chart** to display the survival counts.
3. Add the title **"Survival by Gender"** to the chart.
4. Label the x-axis as **'Gender'** and the y-axis as **'Count'**.
5. The legend should indicate **'Not Survived'** and **'Survived'**.

The Titanic dataset contains columns as shown below,

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Brad
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,
7,0,1,"McCarthy, Mr. Timothy J"
8,0,3,"Palsson, Master. Gosta L
9,1,3,"Johnson, Mrs. Oscar W (E
10,1,2,"Nasser, Mrs. Nicholas (
```

Note: Refer to the visible test case for better reference.

```

< Prev Reset Submit Next >

5.2.5. Bar Plo... 03:56

Write a Python code to plot a stacked bar chart that shows the count of passengers who survived and did not survive, grouped by passenger class (**Pclass**), in the Titanic dataset. The chart should display the following specifications:

1. Group the data by the **Pclass** column and count the number of survivors (0 = Did not survive, 1 = Survived) for each class using **value_counts()**.
2. Use a **stacked bar chart** to display the survival counts.
3. Add the title **"Survival by Pclass"** to the chart.
4. Label the x-axis as **'Pclass'** and the y-axis as **'Count'**.
5. The legend should indicate **'Not Survived'** and **'Survived'**.

The Titanic dataset contains columns as shown below,

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Bradl
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,
7,0,1,"McCarthy, Mr. Timothy J"
8,0,3,"Palsson, Master. Gosta L
9,1,3,"Johnson, Mrs. Oscar W (E
10,1,2,"Nasser, Mrs. Nicholas (
```

Note:

- Refer to the visible test case for better reference.
- Ensure you use the **groupby()** function with **value_counts()** to count the survivors and non-survivors for each **Pclass**.
- Do **not** manually use **size()** or **unstack()** without **value_counts()**. Use the **value_counts()** method for counting survival status directly.

5.2.6. Bar Plo...

02:08

Write a Python code to plot a stacked bar chart showing the survival count for passengers based on their embarkation location in the Titanic dataset.
The chart should display the following specifications:

1. Use the **Embarked** column to determine the embarkation location. After converting this column into dummy variables (using **pd.get_dummies()**), plot the survival count based on the **Embarked_Q** column (representing passengers who embarked from Queenstown) in relation to survival.
2. Set the chart type to 'bar' and make it stacked.
3. Add the title **"Survival by Embarked "** to the chart.
4. Label the x-axis as **'Embarked'** and the y-axis as **'Count'**.
5. Include a legend to distinguish between survivors and non-survivors (label the legend as **'Survived'** and **'Not Survived'**).

The Titanic dataset contains columns as shown below,

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Bradl
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,

5.2.10. Scatt... 01:50

Write a Python code to plot a scatter plot showing the relationship between the 'Age' and 'Fare' columns in the Titanic dataset. The scatter plot should display the following specifications:

1. Use the **Age** column for the x-axis and the **Fare** column for the y-axis.
2. Set the title of the plot to "**Age vs. Fare**".
3. Label the x-axis as '**Age**' and the y-axis as '**Fare**'.

The Titanic dataset contains columns as shown below,

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Brad
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,
7,0,1,"McCarthy, Mr. Timothy J"
8,0,3,"Palsson, Master. Gosta L
9,1,3,"Johnson, Mrs. Oscar W (E
10,1,2,"Nasser, Mrs. Nicholas (
```

5.2.11. Scatt... 02:42

Write a Python code to plot a scatter plot showing the relationship between the 'Age' and 'Fare' columns in the Titanic dataset, with points color-coded by survival status. The scatter plot should display the following specifications:

1. Use the **Age** column for the x-axis and the **Fare** column for the y-axis.
2. Color the points based on the **Survived** column: **Red** for passengers who did not survive (**Survived = 0**). **Blue** for passengers who survived (**Survived = 1**).
3. Set the title of the plot to "**Age vs. Fare by Survival**".
4. Label the x-axis as '**Age**' and the y-axis as '**Fare**'.

The Titanic dataset contains columns as shown below,

Sample Data:

```
PassengerId,Survived,Pclass,Nan
1,0,3,"Braund, Mr. Owen Harris"
2,1,1,"Cumings, Mrs. John Bradl
3,1,3,"Heikkinen, Miss. Laina",
4,1,1,"Futrelle, Mrs. Jacques H
5,0,3,"Allen, Mr. William Henry
6,0,3,"Moran, Mr. James",male,,
7,0,1,"McCarthy, Mr. Timothy J"
8,0,3,"Palsson, Master. Gosta L
9,1,3,"Johnson, Mrs. Oscar W (E
10,1,2,"Nasser, Mrs. Nicholas (
```
